

COLOUR DECORATION ENGRAVING INFILL INFORMATION SHEET

This information is a guide for all customers interested in using our Engraving Infill service.

We can decorate glass and crystal with colour in three ways:

1. Using a 4 colour Pad Printing Machine. (Please see our information sheet 'Colour Decoration – Pad Printing')
2. Using a Decal Transfer system. (Please see our information sheet 'Colour Decoration – Decal Transfer')
3. **Using a colour infill in an engraving, as described below.**

COLOUR INFILL.

We have a variety of colours that can be added to any surface engraving we create on glass and crystal. For example, we can add Gold to a Winners name, Silver for an Anniversary piece or Red to represent the identity of corporate or sporting associations. The colour is added by hand to the entire engraving or to selected parts required, and gives a strong solid finish. If infill is required on any of our Rock Tablet[®] or Ice Block[®] products, we recommend that the colour is applied to engraving on the front face only, because the thickness of the jade glass can change the appearance of the colours if applied to the rear face.

When typing your order on the online form, the Colour infill option is available when entering engraving details. Scroll down to the heading 'Colour' – you will see that 'No Infill' is the default choice, but any of the available colours can be selected from the drop down menu. If only specific parts of the engraving are to be infilled, please mention this in the 'Notes' section at the bottom of the page i.e. 'Words only to be infilled'.

The colour infill is an embellishment for decorative purposes only, and is not suitable for items that will require frequent 'heavy' cleaning. There is not a colour 'matching' facility (i.e. Pantone references).

Colours Available:

Yellow
Dark Blue
Silver
Red
White
Gold (Metallic)
Light Blue
Gold (£ Coin)
Black
Green

If you have any queries regarding suitability of colour infill for your requirements, please contact our offices.
